

RBH SAFETY

Incident Management Workflow Reference Guide

Start-to-finish instructions for reviewing, investigating, correcting, verifying, and closing safety reports

Guide scope

This guide covers the current RBH dashboard workflow in Build 53.1.7, including the public report intake, the four-step management workflow, Corrective Action sub-stages, role responsibilities, email triggers, and common controls.

Prepared for RBH Insulation, Inc.

October 7, 2026

Contents & workflow at a glance

Home & navigation	Understand the dashboard, counts, queues, and workflow step pills.
Submitting a safety report	What the reporting party enters before the record reaches the Safety Inbox.
Step 1 — Review	Review the report, handle injury follow-up, confirm the Report Owner, and decide whether to investigate.
Step 2 — Investigation	Document what happened and why, with optional supporting evidence.
Step 3 — Corrective Actions	Choose No additional action or complete Plan & Assign → Complete Work → Verify.
Step 4 — Close	Confirm every required item is complete and deliberately close the record.
Emails & notifications	Know exactly when RBH sends an email — and when it does not.
Roles & ownership	Understand Report Owner vs. Corrective Action Owner and who can perform each action.
Common controls & special situations	Drafts, guidance, language, PDFs, completed steps, restart/reopen, and troubleshooting.

The four-step management workflow

STEP 1 Review	STEP 2 Investigation	STEP 3 Corrective Actions	STEP 4 Close
------------------	-------------------------	------------------------------	-----------------

Important: Step 3 contains three internal stages

Corrective Actions is one main workflow step with three internal stages: 1) Plan & assign, 2) Complete work, and 3) Verify. A report stays in Step 3 until every required corrective action is verified.

Record-history rule

Once a workflow step is completed, it becomes read-only. Minor clarification belongs in Notes & activity history. If the underlying workflow data truly must be changed, an authorized manager must deliberately restart or reopen the workflow so the audit trail remains intact.

1. Home & navigation

Home dashboard — counts, shortcuts, Needs your attention, and the workflow-position pill.

What to look at first

- **Top summary counts** — Open, New, Overdue, To review, and Injuries provide a fast view of active workload.
- **Needs your attention** — Shows reports that need action. Each item can show both an operational status pill (for example New) and a workflow-position pill (for example Step 1 · Review).
- **Status vs. step** — Status tells you the record condition; the Step pill tells you exactly where the record is in the four-step workflow. A report can be In progress while still sitting in Review, Investigation, Corrective Actions, or Close.
- **Open My Work** — Takes you to work assigned specifically to you, such as an assigned investigation or corrective action.
- **Submit a safety report** — Opens the public field-reporting experience in a new tab.
- **Bell** — The bell in the upper-right surfaces unresolved items that need attention. Resolved items are removed from the active notification view.

Left navigation

- **Home** — operational snapshot and quick links.
- **My Work** — items assigned to the signed-in user; hidden for Read Only users.
- **Safety Inbox** — report records available to the user's role.
- **Corrective Actions** — focused corrective-action queue.
- **Analytics** — report volume, status, hazard, and response trends.
- **Admin** — user and administrative functions; Admin role only.

2. Submitting a safety report

Emergency first

If there is an emergency, the form directs the reporter to call 911 and the site supervisor first. Once everyone is safe, the report documents what happened.

- 1. Answer the injury question.** “Was anyone hurt or made sick?” requires an explicit Yes or No. If Yes is selected, the record is classified as an Injury / illness report. If No is selected, the reporter chooses a report type such as Near miss, Unsafe condition, Unsafe work practice, Vehicle / equipment, or Other.
- 2. Enter where and when.** Enter the incident address, an optional specific location, and the date/time the issue was noticed. The form defaults the observed date/time to the device's current local time; change it when the event occurred earlier.
- 3. Describe what happened.** The description is required. The reporter can also choose a hazard type, potential severity, and add who or what was involved / witnesses.
- 4. Document the immediate response.** Optional fields capture what was done right away and what the reporter thinks would fix or prevent the issue.
- 5. Add photos or files.** The reporter can Take photo, Choose from phone, or choose photos/files. Up to 10 files are supported; large photos are optimized before upload. Do not photograph injuries.
- 6. Add reporter information if desired.** Name, role, and phone/email are optional. The form supports anonymous reporting.
- 7. Send the report.** Click “Send report to the safety team.” The new record enters the Safety Inbox and begins at Step 1 — Review.

Email sent on new report

When a new report is successfully submitted, RBH sends a new-report email to the organization's active Admin and Safety Manager users who have an email address.

Privacy reminder

Keep the report factual. Do not enter Social Security numbers, unnecessary medical details, or other sensitive personal information in free-text fields.

3. Step 1 — Review

Step 1 of 4 · Review Report
Review the submission, then acknowledge it for investigation or close it with a documented reason.

STEP 1
Review

STEP 2
Investigation

STEP 3
Corrective Actions

STEP 4
Close

1 Review the report

Start here
Review the report and attachments. If an injury is involved, complete the serious-event screen. Then either start an investigation or close the report with a documented reason.

Report owner
The person responsible for moving this report through the workflow. If you do not change this field, the report will be assigned to you when you start the investigation. Changing this dropdown does not send an email. If you choose someone else, they are notified only after you click Start investigation.

Alex Morgan · Admin

Description	Example - Vehicle entered a restricted work area	Hazard	Vehicle or fleet (trucks, trailers)
Potential severity	Moderate - medical treatment	Involves injury	No
Involved / witnesses	Example crew members	Immediate action	Vehicle removed from area
Suggested fix	Driver safety refresher training	Incident address	Example worksite
Specific location	Loading area	Observed at	10/7/2026, 9:48:00 AM
Reported by	Example Reporter	Role	Site visitor / other
Contact	reporter@example.com	Form language	English
Submitted	10/7/2026, 1:49:54 PM		

No photos or files attached.

Ready for a decision
Start an investigation if this report needs follow-up, or close it now when no investigation is needed.

Close report — no investigation needed **Start investigation →**

Step 1 — Review the report. The screen shows the workflow bar, submitted details, and the decision controls.

Step-by-step

- 1. Read the submission.** Review the description, hazard, severity, incident location, people/witnesses, immediate action, suggested fix, reporter information, and any attachments.
- 2. Handle injury follow-up when applicable.** If the report involves an injury or illness, complete the on-screen management/regulatory follow-up before trying to close the report. The RBH screen supports management screening; it does not itself submit a Cal/OSHA report.
- 3. Confirm the Report Owner.** The Report Owner is the manager accountable for moving the report through the workflow and receiving report-level follow-up emails. Only active Admin or Safety Manager users can be Report Owner.
- 4. Choose the path.** Click Start investigation when follow-up is needed. Use Close report — no investigation needed only when the issue can genuinely be resolved during the initial review.

If you close at Step 1

The close-without-investigation path requires a documented closure reason: No issue found, Informational only, Not safety-related, Duplicate report, or Other. A closure note is required when Other is selected. The record leaves open work queues but remains in history.

Email behavior at Step 1

- **Opening or reading the report** — no email.
- **Browsing/changing the Step 1 Report Owner dropdown before starting** — no email just for browsing the selection.
- **Start Investigation with yourself as Report Owner** — no handoff email.
- **Start Investigation with a different Report Owner** — the selected person receives the Report Owner handoff email after the transition to Step 2 succeeds.
- **Changing the confirmed Report Owner later** — the new owner receives an email when the change is confirmed; changing ownership to yourself does not send a handoff email.

4. Step 2 — Investigation

Read report in English Original: English · Viewing: English REPORT OWNER Alex Morgan alex.morgan@example.com om Change Show guidance

Step 2 of 4 · Investigation
Document what happened and why it happened.

STEP 1 **Review** STEP 2 **Investigation** STEP 3 Corrective Actions STEP 4 Close

2 Investigation

Two questions before continuing
Keep this simple and factual. Supporting evidence is optional, but recommended when it helps explain what happened.

What happened?
What did the investigation determine actually happened?

Why did it happen?
What caused or allowed this issue to happen?

Investigation evidence
(optional) 0 files
Add photos, documents, statements, or other information that supports what the investigation found.
No investigation evidence added yet.

Add investigation evidence Files save automatically after selection.
Optional. Up to 5 files at a time, 10 MB each.

Save draft & return home Finish investigation →

Notes & activity history

Step 2 — Investigation. Two required narrative fields, optional evidence, and Save draft / Finish investigation controls.

- 1. Document “What happened?”** Record what the investigation determined actually occurred. Keep the entry factual and clear.
- 2. Document “Why did it happen?”** Record the root cause, contributing condition, process failure, or other reason that caused or allowed the event.
- 3. Add investigation evidence if useful.** Photos, documents, statements, or other supporting information are optional. The current screen allows up to 5 files at a time, 10 MB each.
- 4. Save if you are not finished.** Click Save draft & return home to preserve the current work without advancing the workflow.
- 5. Finish the investigation.** When the two investigation questions are complete, click Finish investigation →. The record advances to Step 3 — Corrective Actions.

No routine email on Finish Investigation

Completing Step 2 does not send a routine workflow email. The next email is triggered only if corrective-action responsibility is assigned or work is later sent for review.

Completed step becomes read-only

After Step 2 is completed, the investigation fields are locked. If a minor clarification is needed, use Notes & activity history. A material correction requires a deliberate workflow restart.

5. Step 3 — Corrective Actions: decision

Read report in English Original: English · Viewing: Eng REPORT OWNER Alex Morgan alex.morgan@example.com Change ☐ Show guidance

Step 3 of 4 · Corrective Actions · Plan & Assign
Decide whether anything still needs to be corrected. If yes, create and assign the actions. If no, document why.

STEP 1 ✓ Review STEP 2 ✓ Investigation **STEP 3 Corrective Actions** STEP 4 Close

3 Corrective Actions

Does anything still need to be corrected?
Choose the option that matches what the investigation found. Do not choose “No” just because the immediate issue was handled if an underlying hazard, process, equipment, training, or work-practice issue still remains.

Yes — something still needs to be fixed
Choose this when something still needs to be fixed, changed, repaired, trained, communicated, or assigned.
Examples: replace damaged equipment; change a work practice; provide training; install a guard or barrier.

No — nothing else needs to be fixed
Choose this only when nothing remains to correct after the investigation.
Examples: the issue was fully corrected immediately and no underlying problem remains; the same issue is already covered by an existing active corrective action.

Notes & activity history

More actions PDF language My reading language Download PDF

Step 3 decision — choose Yes only when something still needs to be corrected; choose No only when nothing remains after the investigation.

Choose the branch that matches the investigation

- **Yes — something still needs to be fixed.** Use this when a condition, process, equipment issue, training gap, communication gap, work practice, or other item still needs an assigned correction.
- **No — nothing else needs to be fixed.** Use this only when the investigation confirms that nothing remains to correct. Do not choose No merely because someone handled the immediate condition if the underlying issue still exists.

Examples for Yes

Replace damaged equipment; change a work practice; provide training; install a guard or barrier; make a process or administrative change.

Examples for No

The issue was fully corrected immediately and no underlying problem remains; the same issue is already covered by an existing active corrective action; the investigation found no unsafe condition requiring further correction.

After you make a choice, the large decision cards collapse into a compact summary. Use Change decision if you selected the wrong branch before the step is completed.

6. Step 3 — No additional corrective action

Read report in English Original: English · Viewing REPORT OWNER Alex Morgan alex.morgan@example.com ail.com Change ☐ Show guidance

Step 3 of 4 · Corrective Actions · Plan & Assign
Decide whether anything still needs to be corrected. If yes, create and assign the actions. If no, document why.

STEP 1 ✓ Review STEP 2 ✓ Investigation **STEP 3 Corrective Actions** STEP 4 Close

3 Corrective Actions

No additional corrective action needed
Nothing else needs to be corrected. Document the reason below before continuing to Close. [Change decision](#)

Explain why nothing else needs to be fixed
This is a documented safety decision, not a skip. The final Close step will still require a deliberate closure.

Reason
— Choose a reason —

Brief explanation
Explain why nothing else needs to be fixed.

Continue to Close →

Notes & activity history

No-action branch — select a reason, add the explanation, then deliberately continue to the final Close step.

- 1. Choose a reason.** Available reasons are: Corrected immediately — nothing remains to fix; Investigation found no unsafe condition requiring correction; Already covered by another active corrective action; Duplicate / previously addressed; or Other.
- 2. Add a brief explanation.** Explain why nothing else needs to be fixed. This is the documented safety decision and should make sense to someone reviewing the record later.
- 3. Click Continue to Close →.** The system records the no-additional-action decision and moves the report to Step 4.
- 4. Close the report in Step 4.** The report is not automatically closed merely because no corrective action is needed. Final closure remains a separate deliberate action.

Why this is different from Step 1 close

Step 1 “Close report — no investigation needed” means no investigation was necessary. Step 3 “No additional corrective action needed” means an investigation was completed, but no further corrective work remains.

7. Step 3 — Plan & Assign

Step 3 of 4 · Corrective Actions · Plan & Assign

Decide whether anything still needs to be corrected. If yes, create and assign the actions. If no, document why.

Save draft & return home

Assign actions →

STEP 1
✓ Review

STEP 2
✓ Investigation

STEP 3
Corrective Actions

STEP 4
Close

3 Corrective Actions

Corrective action required

Something still needs to be corrected. Plan and assign the work below.

Change decision

1 Plan & assign

2 Complete work

3 Verify

1 Plan & assign

Create one action for each different fix, owner, or deadline.

Current

New Corrective Action 1

Draft action

0 of 5 required fields

Not started

Remove

Still needed: what needs to be fixed, type of fix, owner, due date, priority.

What needs to be fixed?

Describe the specific fix or change needed.

Assigned to

Due date

Priority

Unassigned

10/07/2026

Low

Medium

High

Type of fix

— Select type of fix —

+ Add another corrective action

Save draft & return home

Assign actions →

Plan & Assign — required fields, priority buttons, type of fix, Add another corrective action, and Assign actions.

Required information for each corrective action

What needs to be fixed?	Describe the specific correction or change. Make it clear enough that the assigned person knows what to do.
Assigned to	Choose the active dashboard user who owns this action. Read Only users are not available for assignment.
Due date	Set the date the action should be complete.
Priority	Choose Low, Medium, or High.
Type of fix	Elimination, Substitution, Engineering control, Administrative / work practice, PPE, or Other.

1. **Complete the first action.** The progress pill shows how many of the five required fields are complete and the red guidance line lists anything still missing.
2. **Add another action when needed.** Click + Add another corrective action when a separate fix, owner, or deadline should be tracked independently.
3. **Save a draft if you are not ready to assign.** Save draft & return home preserves the plan but does not activate the actions and does not send assignment emails.
4. **Activate the plan.** Click Assign actions → only after the plan is ready. The action becomes live and moves to Complete Work.

Email sent on assignment

When actions are activated with Assign actions, each assigned Corrective Action Owner receives an action-specific assignment email. The email links the user back to the assigned action.

8. Step 3 — Complete Work

Step 3 of 4 - Corrective Actions - Complete Work
 1 corrective action still needs completion. Submitted actions stay hidden until every action is ready for review.

STEP 1 ✓ Review STEP 2 ✓ Investigation **STEP 3 Corrective Actions** STEP 4 Close

3 Corrective Actions

1 Plan & assign
Plan assigned

2 **Complete work**
Complete the actions shown

3 Verify
Approve or request changes

2 Complete work Current
 Record what was completed for each action that still needs attention.

Only unfinished or returned actions are shown
 Send each action for review when its work is complete. The review step opens after every action is ready. If a reviewer sends an action back later, only that returned action comes back here.

Corrective Action #1 In progress

Install vehicle-control barrier at the restricted work area

Assigned to: Alex Morgan Due: 10/8/2026, 8:00 PM Priority: Medium Type: Administrative / work practice

Required: Describe what was completed. Add any supporting evidence below before submitting. Evidence is optional unless your company requires it.

What was completed?
 Describe what was completed and anything the reviewer should know.

Corrective Action #1 evidence 0 files
 Photos or files that show what was fixed. Evidence stays with this corrective action throughout completion and review.
 No evidence uploaded for this corrective action.

Add evidence Files save automatically after selection.
 Up to 5 files at a time, 10 MB each. Remove is available for mistakes; every removal is recorded in Activity.

Send for review →

Notes & activity history

Complete Work — only unfinished or returned actions are shown. Enter what was completed, add evidence if useful, then Send for review.

- 1. Open the assigned action.** The action card repeats the plan details: description, owner, due date, priority, and type of fix.
- 2. Describe what was completed.** The “What was completed?” field is required before the action can be submitted for review.
- 3. Add supporting evidence if useful.** Evidence is optional unless your company requires it. The screen allows up to 5 files at a time, 10 MB each. Files save automatically after selection; removal is available for mistakes and removals are recorded in Activity.
- 4. Click Send for review → .** The action leaves Complete Work and moves to the verification queue.

Who can complete work?

The assigned Corrective Action Owner can complete their own action. Admins and Safety Managers can also complete corrective-action work when necessary.

Email sent when work is submitted

Send for review emails the current Report Owner. If the report has no valid active Report Owner, RBH falls back to the active Admin / Safety Manager group so the submitted work does not sit unnoticed.

If a reviewer later sends the action back, only the returned action comes back into Complete Work. Update the completion note and/or evidence, then send it for review again.

9. Step 3 — Verify Work

Verify Work — review submitted work, enter verification notes as needed, then Verify as complete or Send back for changes.

- 1. Review the action plan.** Confirm the original corrective action, assigned owner, due date, priority, and type of fix.
- 2. Review the completed work.** Read the action owner's completion note and any attached evidence.
- 3. Add verification notes when useful.** Verification notes are optional when approving. They are required when the action is being sent back for changes.
- 4. Choose the decision.** Click Verify as complete when the fix is satisfactory. Click Send back for changes when more work, evidence, or clarification is required.

Send back for changes

The reviewer must explain exactly what still needs to be done. RBH sends that note to the assigned Corrective Action Owner, and the action returns to Complete Work for update and resubmission.

Verify as complete

Verification marks the action complete. No routine email is sent merely because the action was verified.

For multiple corrective actions, the reviewer works through each action independently. A report cannot leave Step 3 until every active corrective action is verified.

10. Step 3 — All corrective actions verified

Completed step — read only. Add a note for a clarification, or restart the workflow if a material correction is required.

STEP 1
✓ Review

STEP 2
✓ Investigation

STEP 3
✓ Corrective Actions

STEP 4
Close

3 Corrective Actions

Completed step - read only
This information is locked to protect the record history. For a minor clarification, add a note. If the underlying information must be changed, restart the workflow and document the correction.

✓ Plan & assign
Plan assigned

✓ Complete work
Work ready

✓ Verify
All actions verified

3 Verify work
Approve each completed action or return only the action that needs more work. Complete

Review and decide
Each submitted action is ready for an authorized reviewer. Verify complete actions, or send back only the action that needs more work. Returned actions go back to their assigned corrective-action owner.

All corrective actions are verified.
Review the completed actions below for visibility, then continue to the final Close step when you are ready.

Corrective Action #1
Assigned action Verified

Assigned to: Alex Morgan Due: 10/9/2026, 6:00 PM Priority: Medium Type: Administrative / work practice

Completed work submitted
Example completion note
Submitted 10/7/2026, 2:31 PM by Example User

Corrective Action #1 evidence
Photos or files that show what was fixed. Evidence stays with this corrective action throughout completion and review. 0 files
No evidence uploaded for this corrective action.

Verified - 10/7/2026, 2:32 PM
Example verification note
Verified by Example Reviewer

Ready for the next step
All corrective actions are verified. You can now close the report. Continue to Close →

Notes & activity history

Verification complete — the action is read-only and the “Ready for the next step” panel allows the manager to continue to Close.

- 1. Confirm every action shows Verified.** The lifecycle strip shows Plan & assign, Complete work, and Verify as complete.
- 2. Review the completed record if needed.** The verified action card remains visible for reference, including the original plan, completion note, evidence, and verification note.
- 3. Click Continue to Close →.** The report advances to Step 4. This transition does not itself close the report.

No routine email on Continue to Close

The transition from verified corrective actions to the Close step does not send a routine workflow email.

11. Step 4 — Close Report

Read report in **English** Original: English · Viewing: I **REPORT OWNER Alex Morgan** alex.morgan@example.com **Change** ☐ Show guidance

Step 4 of 4 · Close Report **Close report**

Confirm everything is complete and close the report.

STEP 1 **✓ Review** STEP 2 **✓ Investigation** STEP 3 **✓ Corrective Actions** STEP 4 **Close**

4 Close report

- ✓ Report reviewed
- ✓ Investigation completed
- ✓ 1 corrective action assigned
- ✓ All corrective actions sent for review
- ✓ All corrective actions verified

Ready to close
All required steps are complete. Close the report to finish the workflow and preserve the full history. **Close report**

Notes & activity history

Step 4 — Close Report. All required checklist items are green and the record is ready for deliberate final closure.

Close checklist

- **Report reviewed** — Step 1 is complete.
- **Investigation completed** — Step 2 is complete, unless the report was appropriately closed from Step 1.
- **Corrective-action requirement satisfied** — Either the No additional action decision is fully documented or the required corrective actions were assigned, completed, sent for review, and verified.
- **Injury regulatory follow-up resolved** — Required before closing an injury/illness record.

- 1. Review the checklist.** Every required item should be green. If anything is missing, RBH explains what must be completed first.
- 2. Click Close report.** RBH asks for confirmation because this is the final workflow action and the report becomes read-only unless reopened.
- 3. Confirm closure.** After the close succeeds, RBH returns you to Home, refreshes the dashboard counts/work queues, and shows a green “Report #... closed” confirmation.
- 4. Find the finalized record later.** The closed record remains in report history and can be reviewed as a read-only record.

No routine operational email on final close

The current build does not send a routine workflow email simply because the report was closed.

12. Email notification map

Event	Recipient	Email?	What it means
New safety report submitted	Active Admins + Safety Managers	Yes	Alerts management that a new report entered the system.
Open/view a report	Nobody	No	Viewing does not create email noise.
Browse Step 1 owner dropdown	Nobody	No	Selection browsing alone sends nothing.
Start Investigation — self remains/becomes Report Owner	Nobody	No	Self-assignment does not need a handoff email.
Start Investigation — different Report Owner selected	New Report Owner	Yes	Sent only after the transition to Step 2 succeeds.
Change confirmed Report Owner later	New Report Owner	Yes*	Sent to the new owner. *No handoff email when changing ownership to yourself.
Finish Investigation	Nobody	No	No routine email at the Step 2 → Step 3 transition.
Save corrective-action draft	Nobody	No	Draft work stays quiet.
Assign corrective action(s)	Each Corrective Action Owner	Yes	Each assigned user receives the action-specific assignment.
Corrective Action Owner sends work for review	Current Report Owner	Yes	Falls back to active Admin/Safety Manager group if no valid Report Owner exists.
Reviewer requests changes	Corrective Action Owner	Yes	Email includes the reviewer's required changes and returns the action for work.
Reviewer verifies action	Nobody	No	Verification itself does not send a routine email.
Continue to Close	Nobody	No	No routine email.
Final Close	Nobody	No	No routine operational close email in the current build.

In-app notifications

The bell can also surface unresolved items that need attention. Email and the in-app alert are related workflow tools, but they are not the same thing.

13. Roles, ownership & accountability

Role summary

Admin	Full operational access plus the Admin/user-management tab. Can review, investigate, plan, complete, verify, close, restart, and reopen.
Safety Manager	Full operational workflow access without the Admin/user-management tab. Can review, investigate, plan, complete, verify, close, restart, and reopen.
Supervisor	Can work operational items specifically assigned to them. Can perform an assigned investigation and/or complete a corrective action assigned to them. Does not perform final verification or closure.
Read Only	View-only access. Cannot own corrective work; My Work is not shown.

Ownership terms

Report Owner	One accountable owner per active workflow cycle. Must be an active Admin or Safety Manager in the same organization. Controls report-level accountability and follow-up email routing; it does not prevent other authorized users from accessing the report.
Corrective Action Owner	Assigned separately for each corrective action. Can be an active non-Read-Only dashboard user. Owns the specific corrective task and receives assignment/change-request emails.
Reviewer / verifier	Verification decisions are performed by an Admin or Safety Manager. No dedicated verifier is required in the current simplified workflow.

A report can have multiple action owners

One report has one current Report Owner, but Step 3 can contain multiple corrective actions with different owners, due dates, priorities, and completion cycles.

14. Common controls you will see throughout the workflow

Save draft & return home	Saves current editable work without intentionally advancing the workflow. Use this when you need to pause.
Show guidance	Turns the inline workflow guidance on/off. The preference is saved for the user.
? Help Coach	Desktop/browser guided help. Opens short role- and screen-aware instructions and can point to the control the user needs.
Read report in	Changes the language used to view supported report content without changing the original report language.
Original / Viewing language	Shows the source language and the current viewing language.
PDF language	Choose the language for the generated report PDF, then click Download PDF.
Notes & activity history	Expandable history of report notes and audit activity. Use it to understand what changed and when.
Back to Safety Inbox	Leaves the incident workspace and returns to the report list.
More actions	Contains exception/administrative actions such as workflow restart when the signed-in role is authorized.
Change (Report Owner)	Allows an Admin or Safety Manager to confirm a different Report Owner. The UI tells you whether an email will be sent before you confirm.

Do not use status changes as a shortcut

Use the workflow buttons shown in the current step. The guided buttons preserve required data, audit history, ownership, and notifications. Do not try to “jump” a report ahead by treating status as a substitute for completing the workflow.

15. Closed records, restart/reopen & record integrity

Closed records

- **Closed records are read-only** — The preserved workflow remains available for review.
- **Closure is deliberate** — Completing Step 3 never auto-closes a report. Final closure occurs only through the Close report action.
- **The system returns Home after final closure** — This gives the user a clear endpoint and refreshes dashboard counts and attention lists.

Restart an open workflow

- **Use restart only for a real workflow reset** — not for routine typo cleanup.
- **Admins and Safety Managers control restart** — completed steps are otherwise protected as read-only.
- **Restart begins a new active workflow cycle** — the current Report Owner is cleared and must be deliberately reassigned. Prior history remains preserved for auditability.

Reopen a closed record

- **Admins and Safety Managers can reopen when justified** — for example, new information appears or the report was closed in error.
- **Reopen starts again at Step 1** — the prior record history remains preserved, and carried-forward information can be confirmed or updated through the new cycle.
- **Verification is required again before closure** — the reopened cycle must work back through the required steps rather than silently reusing the old final state.

Record integrity principle

Completed-step locking, audit history, deliberate restart/reopen, and explicit final closure are intentional. The goal is to preserve a defensible record of what was known, decided, assigned, completed, and verified at each stage.

16. Quick reference & troubleshooting

Which button should I click?

Start investigation →	Step 1: the report needs follow-up.
Close report — no investigation needed	Step 1: the report can genuinely be resolved during initial review; document the closure reason.
Finish investigation →	Step 2: "What happened?" and "Why did it happen?" are complete.
Yes — something still needs to be fixed	Step 3: corrective work remains.
No — nothing else needs to be fixed	Step 3: the investigation confirms no additional correction remains; document why.
Assign actions →	Step 3 Plan & Assign: activate completed action plans and notify action owners.
Send for review →	Step 3 Complete Work: action owner has documented completed work and is ready for manager review.
Send back for changes	Step 3 Verify: more work/evidence/clarification is required; explain what is needed.
Verify as complete	Step 3 Verify: the action satisfactorily addresses the required correction.
Continue to Close →	All corrective actions are verified or the no-action branch is documented.
Close report	Step 4: final checklist is complete and you are ready to finalize the record.

Common questions

Why can't I edit an earlier step?

Completed steps are intentionally read-only. Use a note for a minor clarification or ask an Admin/Safety Manager to restart/reopen when a material workflow correction is truly necessary.

Why is Close report missing?

A required checklist item is still incomplete. Review the Step 4 checklist or finish/verify all corrective actions first.

Why did my corrective action come back?

A reviewer used Send back for changes. Open the returned action in Complete Work, read the reviewer note, update the work/evidence, and resubmit it.

Why did I not receive an email?

Many actions intentionally do not send email. Check the Email notification map in this guide. Also confirm the relevant owner/assignee is an active dashboard user with a valid email.

Why does the Home card say "In progress" and also show a Step pill?

Those are different indicators. Status tells you the record condition; the Step pill tells you the workflow location.

What if I only need to pause?

Use Save draft & return home rather than forcing the step forward.

Where do I get help while using the app?

Use Show guidance on the incident screen or the ? Help Coach on desktop/browser. Account-level questions or requested product changes should go through the person responsible for the organization's TeamWork Safety account.

Bottom line

Follow the current step, use the black primary button only when the work for that step is complete, and let RBH move the record forward. The workflow is designed so the next required action is visible without needing to memorize the system.

Appendix — Screenshot map & version notes

The screenshots in this guide use sanitized example identities and sample incident data. The guide is written to Build 53.1.7 behavior, which includes the corrective-action UI polish, Home workflow step pills, final-close return-to-Home behavior, removal of the general Support form from My Profile, and the in-app Full Reference Guide link.

Home screenshot	Home metrics, Needs your attention, and Step 1 · Review pill.
Step 1 screenshot	Initial review and decision controls.
Step 2 screenshot	Investigation fields and evidence area.
Step 3 decision screenshot	Yes / No corrective-action decision.
Step 3 no-action screenshot	Reason + explanation branch.
Step 3 Plan & Assign screenshot	Compact corrective-action planning card.
Step 3 Complete Work screenshot	Action owner completion and evidence.
Step 3 Verify screenshot	Manager verification and request-changes controls.
Step 3 Verified screenshot	Read-only verified action and Continue to Close.
Step 4 screenshot	Final close checklist and Close report button.
